**AMIS**

AFYA MANAGEMENT INFORMATION SYSTEM

Optimum
Health Services Support

Goodmark (T) LTD

What is AMIS ?

Is a comprehensive and integrated computer system designed to manage all aspects of health facility operations. It is flexible and affordable software that automate the clinical, electronic medical records, administrative, billing, pharmacy and inventory functions with great capability to connect all hospital departments as depicted in the image below

WHY AMIS ?

AMIS 1.0 designed to help health facilities migrate from expensive paper based system to inexpensive electronic data management based on our real Tanzanian environment. A powerful tool that handles multiple users at once and manage all entries from automated departments, store, process and disseminate information within short time.

The features that distinguishes AMIS software 1.0 from other health software is its modular structure, integrated design and multi-level security. It is easily customizable and the graphic user interface is very user friendly.

Afya management information system, AMIS® software 1.0.

benefits of using AMIS

Revenue management.

It offers fast and accurate transactions to assess financial status and other management reports that give an instant feel of how the business is doing, like outstanding amount, pending invoices, debts and number of patients

Simplify operations

Designed to automate system and the process to improve hospitals work flow and increase effectiveness with lesser human resources required to manage

Optimize productivity

The system is designed to be user friendly and effective. Availability of the systems increase operation performance (i.e. number of the transactions served in a unit of time) and the quality of the content output.

Other benefits;

Quality & Consistency

The accuracy of data (information) is highly assured.

Access and Retrieval:

Patient information and transactions can be easily retrieved and accessed.

Facilitates

supervision of inventory and medics.

Cost and Time:

Reduce documentation needs and minimize paperwork.

Audit and Security:

Helps Control system access and fosters voluntary policy compli-

Product features:

The Interactive modules:
